Art Unit: 2613

1. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-21, drawn to a system comprising a decoder, a first memory, a scaler, and an encoder, and a method comprising the determining and storing of a plurality of first motion vectors, and generating one or more second motion vectors and a compressed second video image, classified in class 375, subclass 240.16.
 - II. Claims 22-43, drawn to a video processing device and method, classified in class 375, subclass 240.21.
 - III. Claims 44-51, drawn to a compressed video transcoder device, classified in class 375, subclass 240.12.
 - IV. Claims 52-56, drawn to a method of processing a video data stream, classified in class 375, subclass 240.24.
3. The inventions are distinct, each from the other because:

Inventions Groups I, II, III, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are Groups I, II, III, and IV. Group I involves a system comprising a decoder to receive a video input having one or more motion vectors, a first memory coupled to the video decoder, a scaler coupled to the decoder, and an encoder coupled to the

Art Unit: 2613

scaler and the first memory to provide a compressed representation of the scaled video using the first motion vectors saved in the first memory; and a method comprising determining and storing a plurality of first motion vectors, and generating one or more second motion vectors and a compressed second video image based upon one or more second motion vectors. Group II involves a video processing device and method comprising a video input, a downscaling and decompression module responsive to the video input, a memory buffer responsive to the downscaling and decompression module, a video encoder responsive to the downscaling and decompression module and responsive to the memory buffer. Group III involves a compressed video transcoder device comprising a compressed video input stream that utilizes frame deltas and motion vectors, first, second, and third interfaces, a control input, a downscaling decompression block, and a compression block. Group IV involves a method of processing a video data stream comprising initializing a frame encoder, selecting a macroblock, retrieving motion vectors and building a new motion vector and a delta macroblock.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II, III, and IV, restriction for examination purposes as indicated is proper.

Art Unit: 2613

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
